About the Author

Martin Glinz is a full professor emeritus at the University of Zurich (UZH). From 1993 until 2017, he was a professor of Informatics at UZH's Department of Informatics. From 2007–2016, he was the department head. His interests include requirements and software engineering — in particular modeling, validation, quality, and evolution.

He received a diploma degree in Mathematics in 1977 and a Dr. rer. nat. in Computer Science in 1983, both from RWTH Aachen University. Before joining the University of Zurich, he worked in industry for ten years, where he was active in software engineering research, development, training, and consulting. He retired in summer 2017, but he is still active in Requirements Engineering research, education, and service.

Martin Glinz has over 35 years of experience in Requirements Engineering, both academic and industrial. He is on editorial boards and program committees of major journals and conferences in software and requirements engineering and served as general chair, program chair, steering committee chair and organizer for the top international conferences in his field. He is a full member of the International Requirements Engineering Board (IREB), where he chairs the IREB Council. He received the ACM SIGSOFT Distinguished Service Award and the IEEE International Requirements Engineering Conference Lifetime Service Award in 2016 and the IEEE International Requirements Engineering Conference Most Influential Paper Award in 2017.

Preface

In the preface to the first edition of this glossary, published in May 2011, I wrote:

When looking for definitions of terms in Requirements Engineering, one can find definitions for almost any term by searching the web. However, such searching requires effort and the quality of the results is unpredictable. Frequently, definitions found in different sources are inconsistent with each other. Existing glossaries in Requirements Engineering textbooks mostly focus on the topics covered in these books. Systematic translations of terminology into major languages other than English are missing completely.

This glossary aims at collecting the existing knowledge on Requirements Engineering terminology and defining the core terminology carefully and consistently. In cases where more than one definition is in use or where terms are defined differently when viewed from different perspectives, multiple definitions or perspectives are included. For terms having both a general meaning and a specific meaning in a Requirements Engineering context, both meanings are defined. Important terms are annotated with hints and additional information.

This glossary has closed the gap identified above. The principle of not just compiling existing definitions but defining the core Requirements Engineering terminology carefully and consistently, has also stood the test of time. Nevertheless, after almost ten years since its initial publication, it was time for a major revision.

A good glossary should be a stable work product: users need to rely on a common terminology — which is not possible when that terminology is constantly changing. On the other hand, it would be foolish to believe that terminology does not evolve over time. In particular, the major revision of the IREB CPRE Foundation Level syllabus required adaptations and extensions of the terminology. Doing a major revision was also an occasion to include important terms from the IREB CPRE Advanced Level syllabi (which did not yet exist when the glossary was initially published). Finally, IREB and ISTQB, the International Software Testing Qualification Board, had agreed in 2019 to harmonize the quality and testing terminology in their respective glossaries.

From the 128 terms defined in the first edition of the glossary, 42 (i.e., about one third) remained unchanged. 67 definitions underwent minor or merely syntactic changes. We re-wrote 17 definitions, deleted two ones, and added 85 new definitions. Major additions concern terminology about agile, modeling, prototyping, and product lines. We also added several basic terms such as activity, method, process, or technique.

Many major changes were due to the harmonization of terminology with ISTQB. However, we also modernized fundamental terms: for example, we simplified the definitions of requirement and Requirements Engineering and made major changes to the notes in the definition of system. The major revision of the glossary was also an occasion to mark explanatory notes clearly in all definitions, separating them from the main definition phrase.

The translations of the terminology into other languages, which were an integral part of the previous versions of this glossary, are now published as separate dictionaries of terminology. I gratefully acknowledge the work performed by all the translators.

Karol Frühauf owes my deepest thanks for carefully reviewing all my definition drafts and for fruitful discussions that led to major improvements of this glossary. I also thank Xavier Franch and Stan Bühne for many helpful comments. Most of all, I thank my wife Angelika. Without her love, patience and understanding, most of my professional work, including this one, would not have been possible.

Martin Glinz

Zurich, October 2020

Acknowledgements

I gratefully acknowledge the contributions of several people to this glossary. Discussions and joint work with Klaus Pohl, Chris Rupp and Thorsten Weyer shaped several definitions in the first version of this glossary. Karol Frühauf carefully reviewed my drafts of all definitions in version 2.0. Karol's review comments and the subsequent discussions between him and me were valuable sources for improvement.

The alignment of terminology between the glossaries of IREB and ISTQB was achieved in intense discussions between Karol Frühauf and me for IREB and Matthias Hamburg and Armin Born for ISTQB.

Xavier Franch was the IREB Council shepherd for this glossary. He carefully reviewed the final draft and provided feedback that improved the final document in many places.

Many people contributed to the translations of the terminology into languages other than English. Only the translation into German was done by myself.

Translation

The translation of the glossary terms into Portuguese (Brazil) from the English glossary was provided by Ana Moreira, Bruno Favoreto, Carlos José Locoselli, Dagles Fernandes, George Fialkovitz, Guilherme Simões, Martin Tornquist, Roberto Sabino and Stênio Viveiros. The English terms and definitions were taken 1:1 from the English glossary with the kind permission of the author.

CPRE Online Glossary

The CPRE Glossary is available online in all supported languages:

Version History

Version	Date	Change
1.1.0	May 2011	Initial Document
2.0.0	October 2020	<p>Major revision and extension of terminology covered by this glossary, including important terms from the CPRE Advanced Levels.</p> <p>Aligned with the terminology used in the CPRE Foundation Level 3.0. Implemented the alignment between the IREB and ISTQB glossaries.</p> <p>Created independent dictionaries of RE terminology for languages other than English.</p>
2.0.1	July 2022	Bold used instead of asterisk for key terms
2.0.2	January 2024	Updated to new corporate design
2.1.0	January 2024	Correction of the swapped definitions for the terms <i>redundancy</i> and <i>refactoring</i> as well as for <i>statechart</i> and <i>state-transition diagram</i>

1 Definitions of Terms

Terms formatted in **bold** are key terms that have to be known on the IREB CPRE Foundation Level.

Termo (brasileiro)	Term (English)	Definition
Aceitação, aceite	Acceptance	The process of assessing whether a ↑ system satisfies all its ↑ requirements.
Adequação (do requisito)	Adequacy (of a requirement)	The degree to which a ↑ requirement expresses the ↑ stakeholders' true and agreed desires and needs (i.e., those they had actually in mind when stating the requirement).
Ágil	Agile	<ul style="list-style-type: none"> ▪ In general: <ul style="list-style-type: none"> ▪ Able to move quickly and easily. ▪ Quick, smart, and clever. ▪ In software development: <ul style="list-style-type: none"> ▪ A development approach which builds a product ↑incrementally by dividing work into ↑iterations of fixed duration (↑timeboxes). <p>Note: Agile development is characterized by focusing on delivering a working product in each iteration, collaboration with ↑stakeholders with frequent feedback and adaptation of plans after each iteration based on feedback and changed ↑requirements.</p>
Ambiguidade	Ambiguity	The contrary of → unambiguity
Análise de requisitos	Requirements analysis	<ul style="list-style-type: none"> ▪ Analysis of elicited ↑requirements in order to understand and document them. ▪ Synonym for ↑Requirements Engineering.
Análise estruturada	Structured Analysis	An approach for specifying the ↑ functionality of a system based on a hierarchy of ↑ data flow diagrams. Data flows as well as persistent data are defined in a data dictionary. A ↑ context diagram models the sources of incoming and the destinations of outgoing ↑ data flows.

Termo (brasileiro)	Term (English)	Definition
Artefato	Artifact	Synonym for ↑work product .
Associação	Association	In UML: A relationship between two ↑classes in a ↑UML ↑class model .
Atividade	Activity	An action or a set of actions that a person or group performs to accomplish a ↑task .
Ator	Actor	A person in some ↑role , a ↑system or a technical device in the context of a subject under consideration that interacts with that subject. Note: In RE, the subject under consideration typically is a ↑system . In testing, it may be a test ↑object .
Atributo	Attribute	A characteristic property of an ↑entity or an ↑object .
Backlog	Backlog	→ Product backlog, → sprint backlog
Backlog da sprint	Sprint backlog	A set of ↑product backlog items that have been selected to be implemented in the current ↑sprint .
Backlog do produto	Product backlog	An ordered, typically prioritized collection of work items that a development team has to work on when developing or evolving a ↑system . Note: Items include ↑requirements , ↑defects to be fixed, or ↑refactorings to be done.
Baseline de requisitos, linha de base de requisitos	Requirements baseline	A ↑baseline for a set of ↑requirements .
Baseline, linha de base	Baseline	A stable, change-controlled ↑configuration of ↑work products . Note: Baselines serve for ↑release planning and release definition as well as for project management purposes such as effort estimation.
Branch de requisitos, ramificação de requisitos	Requirements branching	→ Branch

Termo (brasileiro)	Term (English)	Definition
Branch, ramificação	Branch	<p>A line of ↑configurations or ↑work product ↑versions that forks away from the main line (or from another branch) at some point in time.</p> <p>Note: A branch is created by making a copy of some configuration or work product version and making this copy the root of the branch. A branch may be merged with the main line or with another branch at some later point in time.</p>
Característica, recurso, funcionalidade	Feature	<p>A distinguishing characteristic of a ↑system that provides value for ↑stakeholders.</p> <p>Note: A feature typically comprises several ↑requirements and is used for communicating with ↑stakeholders on a higher level of abstraction and for expressing variable or optional characteristics.</p>
Cardinalidade	Cardinality	<ul style="list-style-type: none"> ▪ In modeling: <ul style="list-style-type: none"> ▪ The minimum and maximum number of ↑objects in a relationship. ▪ In mathematics: <ul style="list-style-type: none"> ▪ The number of elements in a set. <p>Note: In ↑UML, the term multiplicity is used for cardinality.</p>
Caso de uso	Use case	<p>A set of possible interactions between external ↑actors and a ↑system that provide a benefit for the actor(s) involved.</p> <p>Note: Use cases specify a system from a user's (or other external actor's) perspective: every use case describes some ↑functionality that the system must provide for the actors involved in the use case.</p>

Termo (brasileiro)	Term (English)	Definition
Cenário	Scenario	<ul style="list-style-type: none"> ▪ In general: <ul style="list-style-type: none"> ▪ A description of a potential sequence of events that lead to a desired (or unwanted) result. ▪ In RE: <ul style="list-style-type: none"> ▪ An ordered sequence of interactions between partners, in particular between a ↑system and external ↑actors. May be a concrete sequence (instance scenario) or a set of potential sequences (type scenario, ↑use case).
Classe	Class	A representation of a set of ↑objects of the same kind by describing the structure of the objects, the ways they can be manipulated and how they behave.
Cliente	Customer	A person or organization who receives a ↑system , a ↑product or a ↑service . Also see ↑stakeholder .
Comitê de controle de mudanças	Change control board	A committee of ↑customer and ↑supplier representatives that decides on ↑change requests . Abbreviation: CCB Note: The Change control board should not be confused with a <i>change advisory board</i> , which is a committee that evaluates change requests for a ↑system in operation and typically has no decision power.
Comitê diretivo	Steering committee	A committee that supervises a project.
Compleitude (do requisito)	Completeness (of requirements)	<ul style="list-style-type: none"> ▪ For a single ↑requirement: <ul style="list-style-type: none"> ▪ The degree to which the specification of a requirement is self-contained. ▪ For a ↑work product covering multiple requirements: <ul style="list-style-type: none"> ▪ The degree to which the work product contains all known requirements that are relevant in the scope of this work product.
Compliance, Observância	Compliance	The adherence of a ↑work product to ↑standards , conventions, regulations, laws, or similar prescriptions.

Termo (brasileiro)	Term (English)	Definition
Componente	Component	<ul style="list-style-type: none"> In general: <ul style="list-style-type: none"> A delimitable part of a ↑system. In software architecture: <ul style="list-style-type: none"> An encapsulated set of coherent ↑objects or ↑classes that jointly achieve some purpose. In testing: <ul style="list-style-type: none"> A part of a ↑system that can be tested in isolation. <p>Note: When viewed in isolation, a component is a ↑system by itself.</p>
Comportamento	Behavior	<p>The way in which a ↑system reacts to stimuli, changes its state and produces observable results.</p> <p>Note: Stimuli may be events or changes of conditions. Their origin may be external or system-internal.</p>
Composição (no contexto técnico)	Composition (in a technical context)	<ul style="list-style-type: none"> An ↑item that is composed of a set of items; forming a whole-part relationship. The act of composing a whole from a set of parts.
Compreensibilidade	Understandability	<p>The degree to which an ↑item is comprehensible to its intended users.</p> <p>Note: Typical items are: a ↑system, a ↑work product, or a part thereof.</p>
Confiabilidade	Reliability	<p>The degree to which a ↑system performs specified functions under specified conditions for a specified period of time.</p> <p>Note: Reliability may be stated as a ↑quality requirement.</p>
Configuração	Configuration	<p>A consistent set of logically coherent ↑items. The items are individually identifiable ↑work products or parts of work products in at most one ↑version per item.</p>
Configuração de requisitos	Requirements configuration	⇒ Configuration

Termo (brasileiro)	Term (English)	Definition
Conflito (sobre requisitos)	Conflict (about requirements)	→ Requirements conflict
Conflito de requisitos	Requirements conflict	<ul style="list-style-type: none"> A situation where two or more ↑requirements cannot be satisfied together. A situation where two or more ↑stakeholders disagree about certain ↑requirements. <p>Note: Requirements conflicts have to be solved by ↑requirements negotiation.</p>
Consistência (dos requisitos)	Consistency (of requirements)	The degree to which a set of ↑ requirements is free of contradicting statements.
Contexto	Context	<ul style="list-style-type: none"> In general: <ul style="list-style-type: none"> The network of thoughts and meanings needed for understanding phenomena or utterances. Especially in RE: <ul style="list-style-type: none"> The part of a ↑system's environment being relevant for understanding the system and its ↑requirements. <p>Note: 1) Context in the second meaning is also called the ↑system context.</p>
Contexto de sistema	System context	The part of a ↑ system's environment that is relevant for the definition as well as the understanding of the ↑ requirements of a ↑ system to be developed.
Controle de fluxo	Control flow	The order in which a set of actions is executed.
Correção	Correctness	<p>The degree to which the information contained in a ↑work product is provably true.</p> <p>Note: In RE, correctness is sometimes used as a synonym for ↑adequacy, particularly when validating a ↑requirement rigorously against formally stated properties in the ↑context of a ↑system.</p>

Termo (brasileiro)	Term (English)	Definition
Critério de aceitação, critério de aceite	Acceptance criteria	In agile: Criteria that the implementation of a ↑ user story must satisfy in order to be accepted by the ↑ stakeholders. Note: Acceptance criteria may also be written for ↑ backlog items other than user stories.
Defeito	Defect	An imperfection or deficiency in a ↑ work product that impairs its intended use. Synonyms: bug, fault
Defeito, bug	Bug	→ Defect
Descoberta de requisitos	Requirements discovery	→ Requirements elicitation
Design, Projeto	Design	<ul style="list-style-type: none"> ▪ A plan or drawing produced to show how something will look, function or be structured before it is made. ▪ The activity of creating a design. ▪ A decorative pattern [This meaning does not apply in the software engineering ↑domain]. Note: <ul style="list-style-type: none"> ▪ In software product development, we distinguish between <i>creative design</i> which shapes the look and feel of the product, i.e., its perceivable form, function and quality, and <i>technical design</i> (also called software design) which determines the inner structure of the product, in particular the software architecture. ▪ The creative design of products is also called <i>product design</i>. ▪ The creative design of digital solutions is called <i>digital design</i>.
Diagrama de atividade	Activity diagram	A diagram type in ↑ UML which models the flow of actions in some part of a ↑ system, including ↑ data flows and areas of responsibility where necessary.
Diagrama de características	Feature diagram	A diagrammatic representation of a ↑ feature model.

Termo (brasileiro)	Term (English)	Definition
Diagrama de caso de uso	Use case diagram	A diagram type in UML that models the actors and the use cases of a system . Note: The boundary between the actors and the use cases constitutes the system boundary .
Diagrama de classes	Class diagram	A diagrammatic representation of a class model .
Diagrama de contexto	Context diagram	<ul style="list-style-type: none"> A diagrammatic representation of a context model. In Structured Analysis, the context diagram is the root of the dataflow diagram hierarchy.
Diagrama de fluxo de dados	Data flow diagram	A diagrammatic representation of a data flow model . Abbreviation: DFD
Diagrama de máquina de estados	State machine diagram	A diagrammatic representation of a state machine .
Diagrama de objeto	Object diagram	A diagrammatic representation of an object model .
Diagrama de sequência	Sequence diagram	A diagram type in UML which models the interactions between a selected set of objects and/or actors in the sequential order in which those interactions occur.
Diagrama de transição de estados	State-transition diagram	→ state machine diagram.
Diagrama entidade-relacionamento	Entity-relationship diagram	A diagrammatic representation of an entity-relationship model . Abbreviation: ERD
Documento de requisitos	Requirements document	A document consisting of a requirements specification . Note: Requirements document is frequently used as a synonym for requirements specification.

Termo (brasileiro)	Term (English)	Definition
Domínio	Domain	A range of relevant things (for some given matter); for example, an ↑ application domain.
Domínio da aplicação	Application domain	Those parts of the real world that are relevant for determining the ↑ context of a ↑ system.
Dono do Produto, product owner	Product owner	A person responsible for a ↑ product in terms of ↑ functionality, value and ↑ risk. Note: The product owner maintains and prioritizes the ↑ product backlog, makes sure that the ↑ stakeholders' ↑ requirements as well as market needs are elicited and adequately documented in the ↑ product backlog and represents the stakeholders when communicating with the development team.
Efetividade	Effectiveness	The degree to which an ↑ item produces the intended results. Note: In RE, effectiveness frequently is the degree to which a ↑ system enables its ↑ users to achieve their ↑ goals.
Eficiência	Efficiency	The degree to which resources are expended in relation to results achieved.
Elaboração (dos requisitos)	Elaboration (of requirements)	An umbrella term for requirements ↑ elicitation, ↑ negotiation and ↑ validation.
Elementos comuns	Commonality	The parts of a ↑ product line that are shared by all its members.
Elicitação (dos requisitos)	Elicitation (of requirements)	⇒ Requirements elicitation
Elicitação de Requisitos	Requirements elicitation	The process of seeking, capturing and consolidating ↑ requirements from available ↑ sources, potentially including the re-construction or creation of requirements.

Termo (brasileiro)	Term (English)	Definition
Engenharia de Requisitos	Requirements Engineering	<p>The systematic and disciplined approach to the ↑specification and management of ↑requirements with the goal of understanding the ↑stakeholders' desires and needs and minimizing the risk of delivering a ↑system that does not meet these desires and needs.</p> <p>Abbreviation: RE</p>
Engenheiro de Requisitos	Requirements Engineer	<p>A person who – in collaboration with ↑stakeholders – elicits, documents, validates, and manages ↑requirements.</p> <p>Note: In most cases, requirements engineer is a ↑role and not a job title.</p>
Entidade	Entity	<ul style="list-style-type: none"> ▪ In general: <ul style="list-style-type: none"> ▪ Anything which is perceivable or conceivable (⇒ item). ▪ In entity-relationship-modeling: <ul style="list-style-type: none"> ▪ an individual ↑item which has an identity and does not depend on another item (⇒ object).
Épico	Epic	In agile development: An abstract description of a ↑ stakeholder need which is larger than what can be implemented in a single ↑ iteration.
Erro	Error	<ul style="list-style-type: none"> ▪ A human action that produces an incorrect result. ▪ A discrepancy between an observed ↑behavior or result and the specified behavior or result. <p>Note: In practice, both meanings are used. Where needed, the meaning of error can be disambiguated by using human error and observed error or observed fault, respectively.</p>
Escopo (do sistema de desenvolvimento)	Scope (of a system development)	The range of things that can be shaped and designed when developing a ↑ system.

Termo (brasileiro)	Term (English)	Definition
Especificação	Specification	<ul style="list-style-type: none"> As a work product: <ul style="list-style-type: none"> A systematically represented description of the properties of an ↑item (a ↑system, a device, etc.) that satisfies given criteria. As a process: <ul style="list-style-type: none"> the process of specifying (↑eliciting, documenting and ↑validating) the properties of an ↑item. <p>Note: A specification may be about required properties (↑requirements specification) or implemented properties (e.g., a technical product specification).</p>
Especificação de requisitos	Requirements specification	<p>A systematically represented collection of ↑requirements, typically for a ↑system, that satisfies given criteria.</p> <p>Note:</p> <ul style="list-style-type: none"> In some situations we distinguish between a ↑customer requirements specification (typically written by the ↑customer) and a ↑system requirements specification or ↑software requirements specification (written by the supplier). Requirements specification may also denote the ↑process of specifying (↑eliciting, documenting and ↑validating) requirements.
Especificação de requisitos de sistema	System requirements specification	<p>A ↑requirements specification pertaining to a ↑system.</p> <p>Note: A system requirements specification is frequently considered to be a synonym for ↑requirements specification.</p> <p>Abbreviation: SyRS</p>
Especificação de requisitos de software	Software requirements specification	<p>A ↑requirements specification pertaining to a software ↑system.</p> <p>Abbreviation: SRS</p>

Termo (brasileiro)	Term (English)	Definition
Especificação de requisitos do cliente	Customer requirements specification	A coarse description of the required capabilities of a ↑system from the ↑customer's perspective. Note: A customer requirements specification is usually supplied by the ↑customer .
Especificação por exemplo	Specification by example	A ↑technique that specifies test cases and ↑requirements for a ↑system by providing examples of how the system should behave.
Falha	Fault	→ Defect
Ferramenta (em engenharia de software)	Tool (in software engineering)	A (software) ↑system that helps develop, operate and maintain systems. Note: In RE, tools support ↑requirements management as well as modeling, documenting, and validating ↑requirements .
Fluxo de dados	Data flow	A sequence of data items flowing from a producer to a consumer.
Fonte (do requisito)	Source (of a requirement)	→ Requirements source
Fonte de requisitos	Requirements source	The source from which a ↑requirement has been derived. Note: Typical sources are ↑stakeholders , documents, existing ↑systems and observations.
Fornecedor	Supplier	A person or organization who delivers a ↑product or ↑service to a ↑customer .
Funcionalidade	Functionality	The capabilities of a ↑system as stated by its ↑functional requirements.
Gerenciamento de mudanças	Change management	A controlled way to effect or deny a requested change of a ↑work product.
Gerenciamento de requisitos	Requirements management	The process of managing existing ↑requirements and requirements-related ↑work products, including the storing, changing and tracing of requirements (↑traceability).

Termo (brasileiro)	Term (English)	Definition
Glossário	Glossary	A collection of definitions of terms that are relevant in some ↑ domain. Note: Frequently, a glossary also contains cross-references, ↑ synonyms, ↑ homonyms, acronyms, and abbreviations.
Gráfico de Burndown	Burndown chart	A diagram plotting the work items that remain to accomplish on a time scale.
Grau de conformidade	Conformity	The degree to which a ↑ work product conforms to regulations given in some ↑ standard.
História (no contexto da ER)	Story (in an RE context)	→ User story
História de Usuário	User story	A description of a need from a ↑ user's perspective together with the expected benefit when this need is satisfied. Note: <ul style="list-style-type: none"> ▪ User stories are typically written in ↑natural language using a ↑phrase template and are accompanied by ↑acceptance criteria. ▪ In ↑agile development, user stories are the main means for communicating needs between a ↑product owner and the development team.
Homônimo	Homonym	A term looking identical to another term but having a different meaning. Note: For example, bill as a bank note and bill as a list (of materials) are homonyms.
Incremento (no desenvolvimento de software)	Increment (in software development)	An addition to a ↑ system under development that extends, enhances or refactors (↑ refactoring) the existing parts of the system. Note: In ↑ agile development, every ↑ iteration produces an increment.
Inspeção	Inspection	A formal ↑ review of a ↑ work product by a group of experts according to given criteria, following a defined procedure.

Termo (brasileiro)	Term (English)	Definition
Item	Item	Anything which is perceivable or conceivable. Synonyms: entity, object
Iteração	Iteration	<ul style="list-style-type: none"> In general: <ul style="list-style-type: none"> The repetition of something, for example, a procedure, a process or a piece of program code. In agile development: <ul style="list-style-type: none"> A ↑timeboxed unit of work in which a development team implements an ↑increment to the ↑system under development. <p>Note: In agile development, iteration and ↑sprint are frequently used as synonyms.</p>
Liberação, release	Release	A ↑ configuration that has been released for installation and use by ↑ customers.
Limite de sistema	System boundary	<p>The boundary between a ↑system and its surrounding ↑context.</p> <p>Note:</p> <ul style="list-style-type: none"> The system boundary delimits the system as it shall be after its implementation and deployment. At the system boundary, the external interfaces between the ↑system and its ↑context have to be defined. The system boundary frequently coincides with the ↑scope of a ↑system (which denotes the range of things that can be shaped and designed). However, this is not always the case: there may be components within the system boundary that have to be re-used as they are (i.e., cannot be shaped nor designed), while in the system context there may be things that can be re-designed when the system is developed (which means that they are in scope).

Termo (brasileiro)	Term (English)	Definition
Limite do contexto	Context boundary	<p>The boundary between the ↑context of a ↑system and those parts of the ↑application domain that are irrelevant for the ↑system and its ↑requirements.</p> <p>Note: The context boundary separates the relevant part of the environment of a system to be developed from the irrelevant part, i.e., the part that does not influence the system to be developed and, thus, does not have to be considered during Requirements Engineering.</p>
Linguagem	Language	<p>A structured set of signs for expressing and communicating information.</p> <p>Note: Signs are any elements that are used for communication: spoken or written words or expressions, symbols, gestures, sounds, etc.</p>
Linguagem de especificação	Specification language	<p>An artificial ↑language that has been created for expressing ↑specifications.</p>
Linguagem de modelagem	Modeling language	<p>A ↑language for expressing ↑models of a certain kind. May be textual, graphic, symbolic or some combination thereof.</p>
Linguagem natural	Natural language	<p>A ↑language that people use for speaking and writing in everyday life.</p> <p>Note: This is in contrast to <i>artificial languages</i> that people have deliberately created for specific purposes such as programming or specifying.</p>
Linha de produto	Product line	<p>A jointly managed set of systems (provided as products or services) that share a common core and have a configurable set of ↑variants for satisfying needs of particular ↑customers or market segments.</p> <p>Note: The points in a product line where there is more than one ↑variant to select from are called ↑variation points.</p> <p>Synonym: Product family</p>

Termo (brasileiro)	Term (English)	Definition
Manutenibilidade	Maintainability	The ease with which a ↑ system can be modified by the intended maintainers. Note: Maintainability may be stated as a ↑ quality requirement.
Maquete (de um sistema digital)	Mock-up (of a digital system)	A medium-fidelity ↑ prototype that demonstrates characteristics of a user interface without implementing any real ↑ functionality. Note: In RE, a mock-up primarily serves for specifying and validating user interfaces.
Máquina de estados	State machine	A ↑ model describing the behavior of a ↑ system by a finite set of <i>states</i> and state <i>transitions</i> . State transitions are triggered by <i>events</i> and can in turn trigger <i>actions</i> and new events.
Meta, objetivo	Goal	A desired state of affairs (that a ↑ stakeholder wants to achieve). Note: Goals describe intentions of stakeholders. They may conflict with one another.
Método	Method	The systematic application of a ↑ technique (or a set of techniques) to achieve an objective or create a ↑ work product.
Metodologia	Methodology	<ul style="list-style-type: none"> ▪ The systematic study of ↑methods in a particular field, in particular, how to select, apply or evaluate methods systematically in a given situation. ▪ A set of ↑methods being applied in some combination.

Termo (brasileiro)	Term (English)	Definition
Modelo	Model	<p>An abstract representation of an existing part of reality or a part of reality to be created.</p> <p>Note:</p> <ul style="list-style-type: none"> ▪ The notion of reality includes any conceivable set of elements, phenomena, or concepts, including other models. ▪ Models are always built for <i>specific purposes</i> in a <i>specific context</i>. ▪ With respect to a model, the modeled part of reality is called the <i>original</i>. ▪ In RE, ↑requirements can be specified with models.
Modelo de atividade	Activity model	A ↑ model of the flow of actions in some part of a ↑ system.
Modelo de características	Feature model	A ↑ model describing the variable features of a ↑ product line, including their relationships and dependencies.
Modelo de caso de uso	Use case model	A ↑ model consisting of a set of ↑ use cases, typically together with a ↑ use case diagram.
Modelo de classes	Class model	A model consisting of a set of ↑ classes and relationships between them.
Modelo de comportamento	Behavior model	A ↑ model describing the ↑ behavior of a ↑ system, e.g., by a ↑ state machine.
Modelo de contexto	Context model	A ↑ model describing a ↑ system in its ↑ context.
Modelo de documento	Document template	<p>A template providing a predefined skeleton structure for a document. (→ requirements template)</p> <p>Note:</p> <p>In RE, document templates can be used to structure ↑requirements documents.</p>

Termo (brasileiro)	Term (English)	Definition
Modelo de domínio	Domain model	<p>A ↑model describing phenomena in an ↑application domain.</p> <p>Note:</p> <ul style="list-style-type: none"> ▪ In RE, domain models are created with the intention to understand the ↑application domain in which a planned ↑system will be situated. ▪ Static domain models specify (business) objects and their relationships in a ↑domain of interest. ▪ Domain story models specify visual stories about how actors interact with devices, artifacts, and other items in a ↑domain.
Modelo de entidade–relacionamento	Entity–relationship model	<p>A ↑model of data that are relevant for a ↑system or of the data of an ↑application domain, consisting of a set of entity types that are each characterized by ↑attributes and linked by relationships.</p> <p>Abbreviation: ER Model</p>
Modelo de fluxo de dados	Data flow model	<p>A model that describes the ↑functionality of a ↑system by ↑activities, data stores and ↑data flows.</p> <p>Note:</p> <p>Incoming data flows trigger activities which then consume the received data, transform them, read/write persistent data held in data stores and then produce new data flows which may be intermediate results that trigger other activities or final results that leave the system.</p>
Modelo de formulário	Form template	<p>A template providing a form with predefined fields to be filled-in. (⇒ requirements template)</p> <p>Note:</p> <p>In RE, form templates can be used to specify ↑use cases or ↑quality requirements.</p>

Termo (brasileiro)	Term (English)	Definition
Modelo de meta, modelo de objetivo	Goal model	A ↑ model representing a set ↑ goals, sub-goals and the relationships between them. Note: Goal models may also include tasks and resources needed to achieve a goal, actors who want to achieve a goal, and obstacles that impede the achievement of a goal.
Modelo de objeto	Object model	A ↑ model describing a set of ↑ objects and relationships between them.
Modelo de processo	Process model	A ↑ model describing a ↑ process or a set of related processes.
Modelo de requisitos	Requirements model	A ↑ model that has been created with the purpose of specifying ↑ requirements.
Modificabilidade	Changeability	⇒ Modifiability
Modificabilidade	Modifiability	The degree to which a ↑ work product or ↑ system can be modified without degrading its ↑ quality.
Multiplicidade	Multiplicity	⇒ Cardinality
Não ambiguidade (dos requisitos)	Unambiguity (of requirements)	The degree to which a ↑ requirement is expressed such that it cannot be understood differently by different people.
Necessidade (do requisito)	Necessity (of a requirement)	The degree to which an individual ↑ requirement is a necessary part of the ↑ requirements specification of a ↑ system.
Negociação	Negotiation	⇒ Requirements negotiation
Negociação de requisitos	Requirements negotiation	A ↑ process where ↑ stakeholders are working toward reaching an agreement to resolve ↑ requirements conflicts.
Norma	Standard	A formal, possibly mandatory set of regulations for how to interpret, develop, manufacture, or execute something. Note: In RE, there are RE-relevant standards issued by ISO/IEC and IEEE.

Termo (brasileiro)	Term (English)	Definition
Objeto	Object	<ul style="list-style-type: none"> ▪ In general: <ul style="list-style-type: none"> ▪ Anything which is perceivable or conceivable (→ item). ▪ In software engineering: <ul style="list-style-type: none"> ▪ an individual ↑item which has an identity, is characterized by the values of its ↑attributes and does not depend on another item (→ entity).
Padrão de processo	Process pattern	An abstract, reusable ↑model of a ↑process which can be used to configure and instantiate a concrete process for a given situation and ↑context.
Papel, função	Role	<ul style="list-style-type: none"> ▪ In general: <ul style="list-style-type: none"> ▪ A part played by a person in a given context. ▪ In ↑UML ↑class models: <ul style="list-style-type: none"> ▪ The parts played by the linked ↑objects in an ↑association.
Persona	Persona	A fictitious character representing a group of ↑users with similar needs, values and habits who are expected to use a ↑system in a similar way.
Perspectiva	Viewpoint	<p>A certain perspective on the ↑requirements of a ↑system.</p> <p>Note: Typical viewpoints are perspectives that a ↑stakeholder or stakeholder group has (for example, an end user's perspective or an operator's perspective). However, there can also be topical viewpoints such as a security viewpoint.</p>
Ponto variante	Variation point	A point in a ↑product line where an element of the product line (typically a variable or a ↑feature) can be chosen from a set of ↑variants.
Portabilidade	Portability	The ease with which a ↑system can be transferred to another platform while preserving its characteristics.
Prática	Practice	A proven way of how to carry out certain types of ↑tasks or ↑activities.
Prioridade	Priority	The level of importance assigned to an ↑item, e.g., a ↑requirement or a ↑defect, according to certain criteria.

Termo (brasileiro)	Term (English)	Definition
Priorização	Prioritization	The process of assigning priorities to a set of ↑ items.
Problema	Problem	A difficulty, open question or undesirable condition that needs investigation, consideration, or solution.
Processo	Process	<p>A set of interrelated ↑activities performed in a given order to process information or materials.</p> <p>Note: The notion of process includes <i>business processes</i> (e.g., how to commission and send ordered goods to ↑customers), <i>information processes</i> (e.g., how to deliver records from a database that match a given query), and <i>technical processes</i> (e.g., cruise control in a car).</p>
Produto (no contexto de software)	Product (in the context of software)	A software-based ↑ system or a ↑ service provided by a system which is developed and marketed by a ↑ supplier and used by ↑ customers.
Produto de trabalho, Produto de artefato	Work product	<p>A recorded, intermediate or final result generated in a work ↑process.</p> <p>Synonym: ↑Artifact</p>
Proteção	Safety	<p>The capability of a ↑system to achieve an acceptable level of probability that the system, under defined conditions, will not reach a state in which human life, health, property, or the environment is endangered.</p> <p>Note: Safety ↑requirements may be stated as ↑quality requirements or in terms of ↑functional requirements.</p>
Prototipação	Prototyping	A ↑ process that involves the creation and evaluation of ↑ prototypes.

Termo (brasileiro)	Term (English)	Definition
Protótipo	Prototype	<ul style="list-style-type: none"> In manufacturing: <ul style="list-style-type: none"> A piece which is built prior to the start of mass production. In software and systems engineering: <ul style="list-style-type: none"> A preliminary, partial realization of certain characteristics of a system. In design: <ul style="list-style-type: none"> A preliminary, partial instance of a design solution. <p>Note:</p> <ul style="list-style-type: none"> In RE, prototypes are used as a means for requirements elicitation (see specification by example) and validation. Prototypes in RE can be classified <ul style="list-style-type: none"> with respect to their degree of fidelity into native prototypes, mock-ups and wireframes; with respect to their purpose into exploratory prototypes and evolutionary prototypes.
Protótipo de alta fidelidade	Native prototype	A high-fidelity prototype that implements critical parts of a system to an extent that stakeholders can use the prototype to see whether the prototyped part of the system will work and behave as expected.
Protótipo evolutivo	Evolutionary prototype	A pilot system forming the core of a system to be developed.
Protótipo exploratório	Exploratory prototype	A throwaway prototype used to create shared understanding, clarify requirements or validate requirements.
Qualidade	Quality	<ul style="list-style-type: none"> In general: <ul style="list-style-type: none"> The degree to which a set of inherent characteristics of an item fulfills requirements. In systems and software engineering: <ul style="list-style-type: none"> The degree to which a system satisfies stated and implied needs of its stakeholders. <p>Note:</p> <p>Quality in this definition means fitness for intended use, as stated in the requirements. This is in contrast to the colloquial notion of quality which is typically connoted with goodness or excellence.</p>

Termo (brasileiro)	Term (English)	Definition
Rastreabilidade	Traceability	<ul style="list-style-type: none"> In general: <ul style="list-style-type: none"> The ability to establish explicit relationships between related work products or items within work products. In RE: <ul style="list-style-type: none"> The ability to trace a requirement <ul style="list-style-type: none"> back to its origins, forward to its implementation in design and code and its associated tests, to requirements it depends on (and vice-versa).
Redundância	Redundancy	Multiple occurrence of the same information or resource.
Refatorar	Refactoring	The improvement of the internal quality of source code, particularly the structure of the code, without changing its observable behavior.
Requisito	Requirement	<ul style="list-style-type: none"> A need perceived by a stakeholder. A capability or property that a system shall have. A documented representation of a need, capability or property.
Requisito de desempenho, requisito de performance	Performance requirement	<p>A requirement describing a performance characteristic (timing, speed, volume, capacity, throughput, ...).</p> <p>Note: In this glossary, performance requirements are regarded as a sub-category of quality requirements. However, they can also be considered as a kind of requirements of its own.</p>
Requisito de domínio	Domain requirement	A domain property in the context of a system that is required to hold.
Requisito de negócio	Business requirement	<p>A requirement stating a business goal, objective or need of an organization.</p> <p>Note: Business requirements typically state those business goals, objectives and needs that shall be achieved by employing a system or a collection of systems.</p>

Termo (brasileiro)	Term (English)	Definition
Requisito de qualidade	Quality requirement	A ↑ requirement that pertains to a quality concern that is not covered by ↑ functional requirements.
Requisito de sistema	System requirement	A ↑ requirement pertaining to a ↑ system.
Requisito de stakeholder, requisito da parte interessada	Stakeholder requirement	A ↑ requirement expressing a ↑ stakeholder desire or need. Note: Stakeholder requirements are typically written by stakeholders and express their desires and needs from their perspective.
Requisito de usuário	User requirement	A ↑ requirement expressing a ↑ user need. Note: User requirements are typically about what a system should do for certain users and how they can interact with the system. User requirements are a subset of ↑ stakeholder requirements.
Requisito funcional	Functional requirement	A ↑ requirement concerning a result or ↑ behavior that shall be provided by a function of a ↑ system.
Requisito não-funcional	Non-functional requirement	A ↑ quality requirement or a ↑ constraint. Note: ↑ Performance requirements may be regarded as another category of non-functional requirements. In this glossary, performance requirements are considered to be a sub-category of ↑ quality requirements.
Restrição (na ER)	Constraint (in RE)	A ↑ requirement that limits the solution space beyond what is necessary for meeting the given ↑ functional requirements and ↑ quality requirements.
Revisão	Review	An evaluation of a ↑ work product by an individual or a group in order to find problems or suggest improvements. Note: Evaluation may be performed with respect to both contents and conformance.

Termo (brasileiro)	Term (English)	Definition
Risco	Risk	A possible event that threatens the success of an endeavor. Note: A risk is typically assessed in terms of its probability and potential damage.
Scrum	Scrum	A popular ↑ process framework for ↑ agile development of a ↑ system.
Segurança	Security	The degree to which a ↑ system protects its data and resources against unauthorized access or use and secures unobstructed access and use for its legitimate ↑ users. Note: Security requirements may be stated as ↑ quality requirements or in terms of ↑ functional requirements.
Semântica	Semantics	The meaning of a sign or a set of signs in a ↑ language.
Semi-formal	Semi-formal	Something which is formal to some extent, but not completely. Note: A ↑ work product is called semi-formal if it contains formal parts, but isn't formalized totally. Typically, a semi-formal work product has a defined ↑ syntax, while the ↑ semantics is partially defined only.
Serviço	Service	The provision of some ↑ functionality to a human or a ↑ system by a provider (a system, organization, group or individual) that delivers value to the receiver. Note: In systems engineering, software engineering and Requirements Engineering, services are typically provided by a ↑ system for a ↑ user or another system.
Sinônimo	Synonym	A word having the same meaning as another word.
Sintaxe	Syntax	The rules for constructing structured signs in a ↑ language.

Termo (brasileiro)	Term (English)	Definition
Sistema	System	<ul style="list-style-type: none"> In general: <ul style="list-style-type: none"> A principle for ordering and structuring. In engineering: <ul style="list-style-type: none"> A coherent, delimitable set of elements that – by coordinated action – achieve some purpose. <p>Note:</p> <ul style="list-style-type: none"> A system may comprise other systems or ↑components as sub-systems. The purposes achieved by a system may be delivered by <ul style="list-style-type: none"> deploying the system at the place(s) where it is used, selling/providing the system as a ↑product to its ↑users, having providers who offer the system’s capabilities as ↑services to users. Systems containing both software and physical ↑components are called <i>cyber-physical systems</i>. Systems spanning software, hardware, people and organizational aspects are called <i>socio-technical systems</i>. <p>Important: In all definitions referring to system in this glossary, system is an umbrella term which includes</p> <ul style="list-style-type: none"> ↑Products provided to ↑customers, ↑Services made available to ↑customers, Other work products such as <i>devices, procedures</i> or <i>tools</i> that help people or organizations achieve some goal, System ↑components or ↑compositions of systems.
Solicitação de mudança	Change request	In RE: A well-argued request for changing one or more ↑ baselined ↑ requirements.
Spike	Spike	In agile development: A task aimed at gaining insight or gathering information, rather than at producing a ↑ product ↑ increment.
Sprint	Sprint	An ↑ iteration in ↑ agile development, particularly when using ↑ Scrum.

Termo (brasileiro)	Term (English)	Definition
Stakeholder, parte interessada	Stakeholder	A person or organization who influences a system's requirements or who is impacted by that system. Note: Influence can also be indirect. For example, some stakeholders may have to follow instructions issued by their managers or organizations.
Statechart, mapa de estados	Statechart	A state machine having states that are hierarchically and/or orthogonally decomposed.
Story map, mapa de histórias	Story map	A two-dimensional arrangement of user stories . Note: A story map helps understand the functionality of a system , identify gaps and plan releases.
Storyboard	Storyboard	A series of sketches or pictures that visualize the execution of a scenario .
Tabela de decisão	Decision table	A tabular representation of a complex decision, specifying which actions to perform for the possible combinations of condition values.
Tarefa	Task	A coherent chunk of work to be done.
Técnica	Technique	A documented set of coherent actions for accomplishing a task or achieving an objective.
Tema	Theme	In agile development: A collection of related user stories .
Template de requisitos	Requirements template	A template for specifying requirements . Note: In RE, several forms of templates are used. Phrase templates are used for specifying individual requirements or user stories . Form templates can be used to specify use cases or quality requirements . Document templates provide a predefined structure for requirements documents .
Template de sentença	Phrase template	A template for the syntactic structure of a phrase that expresses an individual requirement or a user story in natural language . (→ requirements template)

Termo (brasileiro)	Term (English)	Definition
Teste de aceitação, teste de aceite	Acceptance test	A test that assesses whether a ↑system satisfies its ↑requirements . Note: Typically used by ↑customers to determine whether or not to accept a system.
Timebox, prazo delimitado	Timebox	A fixed, non–extendable amount of time for completing a set of ↑tasks .
Tipo de requisito	Kind of requirement	A classification of requirements according to their kind into ↑system requirements (consisting of ↑functional requirements, ↑quality requirements and ↑constraints), <i>project</i> requirements, and <i>process</i> requirements. Note: <ul style="list-style-type: none"> RE is primarily concerned with system requirements. Quality requirements and constraints are also called ↑non–functional requirements.
Tolerância a falhas	Fault tolerance	The capability of a ↑system to operate as intended despite the presence of (hardware or software) ↑faults . Note: Fault tolerance may be stated as a ↑quality requirement.
UML	UML	Abbreviation for Unified Modeling Language, a standardized language for modeling problems or solutions.
Usabilidade	Usability	The degree to which a ↑system can be used by specified ↑users to achieve specified ↑goals in a specified context of use. Note: Usability particularly includes the capability of a ↑system to be understood, learned, used, and liked by its intended ↑users .
Usuário	User	A person who uses the ↑functionality provided by a ↑system . Note: Users (also called end users) always are ↑stakeholders of a ↑system .
Usuário final	End user	→ User

Termo (brasileiro)	Term (English)	Definition
Validação	Validation	<p>The ↑process of confirming that an ↑item (a ↑system, a ↑work product or a part thereof) matches its ↑stakeholders' needs.</p> <p>Note: In RE, validation is the process of confirming that the documented ↑requirements match their ↑stakeholders' needs; in other words: whether the right requirements have been specified.</p>
Variabilidade	Variability	<ul style="list-style-type: none"> ▪ The degree to which a ↑system can be changed or customized. ▪ In product lines: The ↑features that can differ among the members of the ↑product line.
Variante	Variant	One of the possible forms that an ↑ item (e.g., a ↑ requirement) may have.
Verificabilidade (dos requisitos)	Verifiability (of requirements)	<p>The degree to which the fulfillment of a ↑requirement by an implemented ↑system can be verified.</p> <p>Note: Such ↑verification can be performed, for example, by defining ↑acceptance test cases, measurements or ↑inspection procedures.</p>
Verificação	Verification	<p>The process of confirming that an ↑item (a system, a work product, or a part thereof) fulfills its ↑specification.</p> <p>Note: Requirements verification is the process of confirming that the ↑requirements have been documented properly and satisfy the ↑quality criteria for requirements; in other words, whether the requirements have been specified right.</p>
Versão	Version	An occurrence of an ↑ item which exists in multiple, time-ordered occurrences where each occurrence has been created by modifying one of its previous occurrences.
Viabilidade (do requisito)	Feasibility (of a requirement)	The degree to which a ↑ requirement for a ↑ system can be implemented under existing ↑ constraints.

Termo (brasileiro)	Term (English)	Definition
View, visualização	View	<p>An excerpt from a ↑work product, containing only those parts one is currently interested in.</p> <p>Note: A view can abstract or aggregate parts of the work product.</p>
Visão (para o sistema ou produto)	Vision (for a system or product)	<p>A conceptual imagination of a future ↑system or ↑product, describing its key characteristics and how it will create value for its ↑users.</p>
Walkthrough	Walkthrough	<p>A ↑review in which the author of a ↑work product leads the reviewers systematically through the work product and the reviewers ask questions and make comments about possible issues.</p>
Wireframe	Wireframe	<p>A low-fidelity ↑prototype built with simple materials that primarily serves for discussing and validating requirements, design ideas or user interface concepts.</p> <p>Note: When prototyping digital systems, wireframes are typically built with paper. Such prototypes are also called <i>paper prototypes</i>.</p>

2 English - Portuguese (Brazil) Dictionary

Term (English)	Termo (brasileiro)
Acceptance	Aceitação, aceite
Acceptance criteria	Critério de aceitação, critério de aceite
Acceptance test	Teste de aceitação, teste de aceite
Activity	Atividade
Activity diagram	Diagrama de atividade
Activity model	Modelo de atividade
Actor	Ator
Adequacy (of a requirement)	Adequação (do requisito)
Agile	Ágil
Ambiguity	Ambiguidade
Application domain	Domínio da aplicação
Artifact	Artefato
Association	Associação
Attribute	Atributo

Term (English)	Termo (brasileiro)
Backlog	Backlog
Baseline	Baseline, linha de base
Behavior	Comportamento
Behavior model	Modelo de comportamento
Branch	Branch, ramificação
Bug	Defeito, bug
Burndown chart	Gráfico de Burndown
Business requirement	Requisito de negócio
Cardinality	Cardinalidade
Change control board	Comitê de controle de mudanças
Change management	Gerenciamento de mudanças
Change request	Solicitação de mudança
Changeability	Modificabilidade
Class	Classe
Class diagram	Diagrama de classes

Term (English)	Termo (brasileiro)
Class model	Modelo de classes
Commonality	Elementos comuns
Completeness (of requirements)	Compleitude (do requisito)
Compliance	Compliance, Observância
Component	Componente
Composition (in a technical context)	Composição (no contexto técnico)
Configuration	Configuração
Conflict (about requirements)	Conflito (sobre requisitos)
Conformity	Grau de conformidade
Consistency (of requirements)	Consistência (dos requisitos)
Constraint (in RE)	Restrição (na ER)
Context	Contexto
Context boundary	Limite do contexto
Context diagram	Diagrama de contexto
Context model	Modelo de contexto

Term (English)	Termo (brasileiro)
Control flow	Controle de fluxo
Correctness	Correção
Customer	Cliente
Customer requirements specification	Especificação de requisitos do cliente
Data flow	Fluxo de dados
Data flow diagram	Diagrama de fluxo de dados
Data flow model	Modelo de fluxo de dados
Decision table	Tabela de decisão
Defect	Defeito
Design	Design, Projeto
Document template	Modelo de documento
Domain	Domínio
Domain model	Modelo de domínio
Domain requirement	Requisito de domínio
Effectiveness	Efetividade

Term (English)	Termo (brasileiro)
Efficiency	Eficiência
Elaboration (of requirements)	Elaboração (dos requisitos)
Elicitation (of requirements)	Elicitação (dos requisitos)
End user	Usuário final
Entity	Entidade
Entity-relationship diagram	Diagrama entidade-relacionamento
Entity-relationship model	Modelo de entidade-relacionamento
Epic	Épico
Error	Erro
Evolutionary prototype	Protótipo evolutivo
Exploratory prototype	Protótipo exploratório
Fault	Falha
Fault tolerance	Tolerância a falhas
Feasibility (of a requirement)	Viabilidade (do requisito)
Feature	Característica, recurso, funcionalidade

Term (English)	Termo (brasileiro)
Feature diagram	Diagrama de características
Feature model	Modelo de características
Form template	Modelo de formulário
Functional requirement	Requisito funcional
Functionality	Funcionalidade
Glossary	Glossário
Goal	Meta, objetivo
Goal model	Modelo de meta, modelo de objetivo
Homonym	Homônimo
Increment (in software development)	Incremento (no desenvolvimento de software)
Inspection	Inspeção
Item	Item
Iteration	Iteração
Kind of requirement	Tipo de requisito
Language	Linguagem

Term (English)	Termo (brasileiro)
Maintainability	Manutenibilidade
Method	Método
Methodology	Metodologia
Mock-up (of a digital system)	Maquete (de um sistema digital)
Model	Modelo
Modeling language	Linguagem de modelagem
Modifiability	Modificabilidade
Multiplicity	Multiplicidade
Native prototype	Protótipo de alta fidelidade
Natural language	Linguagem natural
Necessity (of a requirement)	Necessidade (do requisito)
Negotiation	Negociação
Non-functional requirement	Requisito não-funcional
Object	Objeto
Object diagram	Diagrama de objeto

Term (English)	Termo (brasileiro)
Object model	Modelo de objeto
Performance requirement	Requisito de desempenho, requisito de performance
Persona	Persona
Phrase template	Template de sentença
Portability	Portabilidade
Practice	Prática
Prioritization	Priorização
Priority	Prioridade
Problem	Problema
Process	Processo
Process model	Modelo de processo
Process pattern	Padrão de processo
Product (in the context of software)	Produto (no contexto de software)
Product backlog	Backlog do produto
Product line	Linha de produto

Term (English)	Termo (brasileiro)
Product owner	Dono do Produto, product owner
Prototype	Protótipo
Prototyping	Prototipação
Quality	Qualidade
Quality requirement	Requisito de qualidade
Redundancy	Redundância
Refactoring	Refatorar
Release	Liberação, release
Reliability	Confiabilidade
Requirement	Requisito
Requirements analysis	Análise de requisitos
Requirements baseline	Baseline de requisitos, linha de base de requisitos
Requirements branching	Branch de requisitos, ramificação de requisitos
Requirements configuration	Configuração de requisitos
Requirements conflict	Conflito de requisitos

Term (English)	Termo (brasileiro)
Requirements discovery	Descoberta de requisitos
Requirements document	Documento de requisitos
Requirements elicitation	Elicitação de Requisitos
Requirements Engineer	Engenheiro de Requisitos
Requirements Engineering	Engenharia de Requisitos
Requirements management	Gerenciamento de requisitos
Requirements model	Modelo de requisitos
Requirements negotiation	Negociação de requisitos
Requirements source	Fonte de requisitos
Requirements specification	Especificação de requisitos
Requirements template	Template de requisitos
Review	Revisão
Risk	Risco
Role	Papel, função
Safety	Proteção

Term (English)	Termo (brasileiro)
Scenario	Cenário
Scope (of a system development)	Escopo (do sistema de desenvolvimento)
Scrum	Scrum
Security	Segurança
Semantics	Semântica
Semi-formal	Semi-formal
Sequence diagram	Diagrama de sequência
Service	Serviço
Software requirements specification	Especificação de requisitos de software
Source (of a requirement)	Fonte (do requisito)
Specification	Especificação
Specification by example	Especificação por exemplo
Specification language	Linguagem de especificação
Spike	Spike
Sprint	Sprint

Term (English)	Termo (brasileiro)
Sprint backlog	Backlog da sprint
Stakeholder	Stakeholder, parte interessada
Stakeholder requirement	Requisito de stakeholder, requisito da parte interessada
Standard	Norma
State machine	Máquina de estados
State machine diagram	Diagrama de máquina de estados
Statechart	Statechart, mapa de estados
State-transition diagram	Diagrama de transição de estados
Steering committee	Comitê diretivo
Story (in an RE context)	História (no contexto da ER)
Story map	Story map, mapa de histórias
Storyboard	Storyboard
Structured Analysis	Análise estruturada
Supplier	Fornecedor
Synonym	Sinônimo

Term (English)	Termo (brasileiro)
Syntax	Sintaxe
System	Sistema
System boundary	Limite de sistema
System context	Contexto de sistema
System requirement	Requisito de sistema
System requirements specification	Especificação de requisitos de sistema
Task	Tarefa
Technique	Técnica
Theme	Tema
Timebox	Timebox, prazo delimitado
Tool (in software engineering)	Ferramenta (em engenharia de software)
Traceability	Rastreabilidade
UML	UML
Unambiguity (of requirements)	Não ambiguidade (dos requisitos)
Understandability	Compreensibilidade

Term (English)	Termo (brasileiro)
Usability	Usabilidade
Use case	Caso de uso
Use case diagram	Diagrama de caso de uso
Use case model	Modelo de caso de uso
User	Usuário
User requirement	Requisito de usuário
User story	História de Usuário
Validation	Validação
Variability	Variabilidade
Variant	Variante
Variation point	Ponto variante
Verifiability (of requirements)	Verificabilidade (dos requisitos)
Verification	Verificação
Version	Versão
View	View, visualização

Term (English)	Termo (brasileiro)
Viewpoint	Perspectiva
Vision (for a system or product)	Visão (para o sistema ou produto)
Walkthrough	Walkthrough
Wireframe	Wireframe
Work product	Produto de trabalho, Produto de artefato

3 Sources

I don't cite sources for individual definitions because I deliberately decided not to compile definitions from various existing sources just by copy-paste, but to carefully re-formulate all definitions consistently and according to today's use.

Several definitions are based on my own work [Gl07], [GlWi07], [Gl19]. Most definitions from the agile domain have been taken from or adapted from the IREB RE@Agile Glossary, which was joint work of the RE@Agile working group and me. The revision of the IREB CPRE Foundation Level syllabus [IREB20] also informed several new or changed definitions.

I consulted numerous international standards when writing the definitions [IEEE610], [IEEE730], [IEEE830], [IEEE1012], [IEEE1028], [ISO9000], [ISO12207], [ISO19770], [ISO20246], [ISO24765], [ISO25000], [ISO25010], [ISO26550], [ISO29148], [ISO42010]. However, as the terminology defined or used in these standards is frequently inconsistent or inadequate for a Requirements Engineering glossary, I did not copy any definitions verbatim from these standards.

Other sources that influenced some definitions are [GaWe89], [My06], [Po10], [St73], and [ZoCo05].

For cross-checking, I also consulted the Merriam-Webster online dictionary (<https://www.merriam-webster.com>) and Wikipedia (<https://en.wikipedia.org>).

Below I want to give credit for some definitions that I have taken more or less verbatim from a source or that are joint work with others. The copyright for cited definitions lies with the authors of the cited work. The copyright for joint work lies jointly with the author of this glossary and the persons mentioned.

Tabelle 3.1: Credits

Term	Reference
Context boundary	Joint work with Klaus Pohl, Chris Rupp, and Thorsten Weyer, based on [Po10], [PoRu11] and [We10]
Functional requirement Model	Joint work with Klaus Pohl, Chris Rupp, and Thorsten Weyer
Quality requirement	Joint work with Klaus Pohl and Chris Rupp, based on [PoRu11]
Requirements Engineering	Joint work with Klaus Pohl, Chris Rupp, and Thorsten Weyer, based on definitions in my course notes on Requirements Engineering I
Requirements specification	Definition is a simplification of a definition that was joint work with Klaus Pohl, Chris Rupp, and Thorsten Weyer
System boundary	Adapted from Pohl and Rupp [PoRu11]
System context	Joint work with Klaus Pohl, Chris Rupp, and Thorsten Weyer based on [Po10], [PoRu11], [We10]
